Description: Name: Name: Description: Description: Version: Version: Description: Description: Copyright: Copyright: Description: Description: Sites: Sites: Sites: Description: Description: Sorting: Sorting: Sorting: Enumerate: Enumerate: Enumerate: Expand: Expand: Expand: Expand: Expand: Description: Advanced Settings: Advanced Settings: Advanced Settings: Advanced Settings: Advanced Settings: Go Home: Go Home: Go Home: File Tree: File Tree: File Tree: File Tree: Advanced Settings: Advanced Settings: Advanced Settings: Advanced Settings: Advanced Settings: Advanced Settings: Version: The invention relates to a cable connector, and more particular to a cable connector that has a tailing structure and is suitable to provide a stable and reliable transmission of the signal. The traditional cable connector is typically used to transmit the high-speed signal. However, during the transmission process, the connector may make the signal unstable and unreliable. Therefore, it is important to design a cable connector to reduce the transmission errors. To solve the above-mentioned problem, U.S. Pat. No. 8,368,849 B2 disclosed a cable connector for connecting two cable connectors. The cable connector includes a body having a cavity and a spring member received in the cavity. The body includes a first sidewall, a second sidewall opposite to the first sidewall and a third sidewall between the first sidewall and the second sidewall. The spring member includes a first spring portion, a second spring portion and a third spring portion. The first spring portion extends along the second sidewall and has a first end contacting the third sidewall, a second end and a first interior. The second spring portion extends along the second sidewall and has a first end contacting the first sidewall, a second end and a second interior. The third spring portion extends along the first sidewall and has a first end contacting the first sidewall and a second end. The first end of the third spring portion has a horizontal end surface that faces the second end of the second spring portion. When the cable connectors are inserted into the cavity, the first end of the third spring portion extends through the third sidewall and the second end of the third

What's New In?
